

TRACETEK SYSTEM

LEAK DETECTION AND LOCATION SYSTEM

Features

- Monitoring of large surfaces.
- Pinpointing of leaks.
- Pre-assembled and ready to use

**For further information contact
Joining Technologies**

Even small leaks in the wrong places cause downtime, disruption, and costly damage and the aftermath ties up resources in clean-up and repair. Why suffer these costs when reliable, distributed leak detection is available? Tracetek technology lets you detect leaks at their source and even pinpoint their location-so you can stop damage before it starts.

Tracetek Systems include sensing cables that detect the presence of liquid at any point along their length. Because the cables use a four-wire construction, monitoring the two circuit loops provides a continual and positive verification of system integrity. If liquid creates a circuit between the two sensing wires, an alarm is triggered - with no moving parts, and no calibration. The system even pinpoints where liquid contacted the sensing cable. By referring to a map of the system layout (supplied as part of the Tracetek system), you can quickly locate the leak source.
