

## T2 FLOOR HEATING SYSTEM

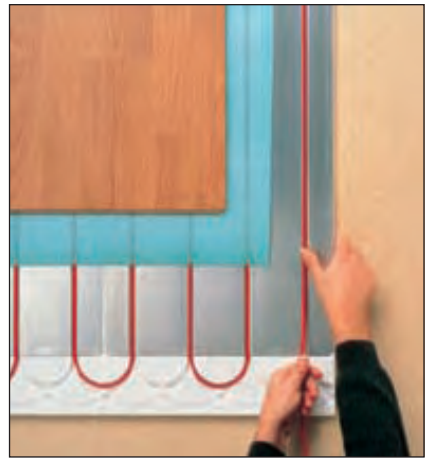

### T2 RED

The T2 RED Self Regulating System senses other sources of heat such as solar radiation, electrical appliances and lighting and it automatically adjusts its heat output accordingly. There is no risk of overheating which gives you an unlimited flexibility for moving furniture around. It can be installed on all sub floors (plastic, concrete, wood, carpets), in dry or wet areas and it can be adapted to all room sizes.

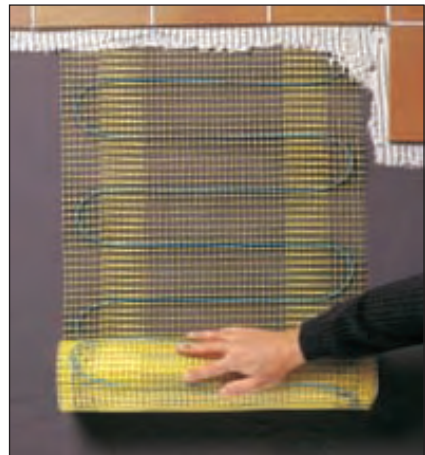

### T2 REFLECTA

The T2 Reflecta System combines the Self Regulating of T2 Red heating cable with pre grooved T2 Reflecta: a thermally insulated, aluminium covered plate. T2 Reflecta provides energy savings of 20% or more. T2 Reflecta is the first choice for wooden or laminate floors in dry areas.

### T2 QUICKNET

The thin T2 QuickNet mat is the ideal solution for renovation, especially for tile floors, the ultra-thin (3mm) mat is laid directly in the adhesive. It can be installed on all sub floors which are sufficiently insulated. T2 QuickNet exists in two versions, 90W/m<sup>2</sup> version and 160W/m<sup>2</sup> version, when more output is required.
