

## SECTION 10 - PRESSLINE EMERGENCY STOP SYSTEM

### PRESSLINE – THE EMERGENCY CABLE STOPPER!

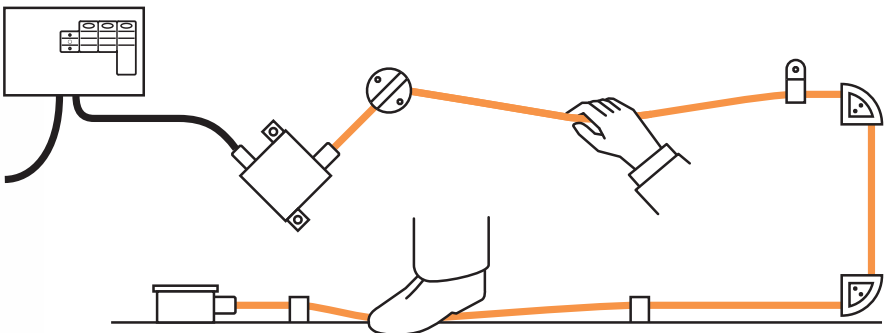

A unique emergency stop system for conveyor installations is now available from Jointing Technologies, the specialist cable accessories distributor.

Pressline, made by Prysmian Cables, is a patented pressure sensitive cable that will switch off machinery or activate alarms when pressed, bent or pulled at any point along its length.

A control unit using dual microprocessor circuitry that eliminates nuisance tripping continuously monitors the cable. It will operate over a continuous length of cable up to 10km no matter how complex or convoluted its route.

The cable is available in three sheath types to suit particular environments – polyurethane, PVC, and low smoke and fume, zero halogen. Pressline is specifically included within the scope of the BSI publication PD 5304 : 2000, Safe use of machinery, and is fully compliant with the Electromagnetic Compatibility Directive embodied in BSEN : 50081.

Pressline is in use in many applications throughout the world and has proved particularly successful for conveyor systems in airport baggage control, bottling plants, assembly lines, paper mills, Hi-Tech manufacturing environments, sorting and distribution centres, and quarries and mines.

**AVAILABLE ONLY FROM JOINTING TECHNOLOGIES**
