

Jointing Technologies are proud to announce that they have been appointed as a Specialist Distributor by 3M to distribute their range of medium voltage cable accessories. With our commitment to new and innovative technology, we are sure that by bringing these products into our portfolio we can again assist the specifier and contractor in finding the right product for the job in hand.

3M's commitment to cold applied technology has seen a huge growth in this country over the past couple of years and Jointing Technologies realised some time ago that they needed to be at the forefront of that growth. As approved specialist distributors we are now able to offer both cold applied and heat shrink products from 415v to 52kV. As our loyal customer base knows only too well, if a product is shown in Jointing Technologies catalogue then it will generally be available "off the shelf". Over the next couple of months, with the help of 3M, we are compiling a stock profile which should enable our customers to order product with complete confidence.
