

# EARTH ROD INSTALLATION MADE RAPID

## NEW - EARTH ROD PRO

### Suitable for SDS+ and SDS Max Drills

Both drive shanks are made to Bosch licence specifications. High alloy content, chromium, nickel, molybdenum European steel.

## INSTALL IN UNDER 2 MINUTES!\*

### Tungsten carbide Tip

'Hammer-grade' Tungsten carbide tip designed to withstand hammer blows into the hardest of masonry substrates.

\*Installation time varies depending on substrate. May take longer if your earth rod becomes snagged up (as often happens with a standard drill bit). If so, try reversing the drill, pulling back slightly and trying again. If this doesn't work, then, like when a drill bit 'get stuck', you may need to remove from the drill, free it up using a hammer and start again once clear of the obstruction. This will still save the installer time compared to hammering all the way in. Always check the ground is free from buried electrical services prior to installing any earth rod. Patent Pending.

**NEW**

# EARTH ROD PRO

## PRODUCTS 2020

Helping installers bore through soil, hard top layers, concrete and underground rock, to achieve a secure earth rod connection first time.
